MESSAGE

Bio-technology is poised to become an integral part of the curriculum in schools. Teachers will be faced with a number of challenges to teach pupils the numerous application potentials of Bio-technology and to present the current state of Bio-technology in a clear way so as to give students the opportunity to discuss the controversial but useful aspects of Bio-technology in a critical and meaningful manner.

In this direction, Eduheal Foundation is spearheading the 'Bio-technology in schools' initiative by conducting various interactive activities like Olympiads, teachers training programmes and career workshops for students.

The Biotechno activity books brought out by the foundation, to be distributed free of cost to lakhs of school students, is an excellent effort to popularize Bio-technology in schools, especially among the young children.

I wish them grand success in this endeavour.
